

CLEVERCLEAN SET FOR EASY CLEAN HOUSE

INTENDED USES:

The set of CleverCLEAN for a house easy cleaning includes the most popular produces of this series :

- for a home interior
- for a kitchen
- for the bathroom/toilet

Kit of these easy to clean compositions allows quickly, easily and with high quality cleaning up of house and always with high quality.

PRODUCT DESCRIPTION:

CleverCLEAN set products made from organic mixture liquid polymers which stays intact for a long time if not being exposed to air. Mixture of polymers has excellent fluidity and can distribute itself to a surface by a very thin layer. 1g of the products easy covers 1m² of the surface.

Products have excellent adhesive properties (product stick to the surface very well). Coating is formed on top of the surfaces is optically transparent and in many cases improves the looks and fixes defects by filling small cracks and scratches.

There is metal oxides nano particles composition inserted into polymer composition. Nano components inside the products create continuous, invisible to eye layer of small particles.

Included to polymers nano particles have the biggest covering area you can imagine and even on a small concentration of nano particles is enough to cover all applicable area completely.

Easy to clean products set for PRO using create invisible nano protective coating in treated surfaces. Protected surfaces obtain typical for nano protective coatings self-cleaned, super hydrophobic and dirt repellent properties which use for easy cleaning house without chemicals, with only dry or wet cloths. Therefore we are calling these products "easy to clean" to easy clean house.

Additionally products have extremely low (average 3g/m²) consumption and create protective coating in surface with long super hydrophobic and self-cleaned lasting effect. These properties allow reduce quantity of the dangerous household chemicals in about 100 times. It supports healthy environment in our home.

Using usual house cleaning products gives only clean looks in a short period of time. Although the dirt is removed from the surface, the backward process begins almost immediately (dirt and pollution start to gather on the surface again), over a period it needs to be cleaned again with chemical products.

Nanoformula eco friendly products create in surface water- and grease repellent nano coating. Treated area obtains self-cleaned properties don't allow the dirt strong stick to surface. The dirt is easy cleaned with dry or wet cloth (even when dirt is burnt in oven plate).

Using CleverCLEAN set for home cleaning in [7-8 times cheaper](#) compare with cleaning by usual household chemicals.

Nanoformula eco friendly house cleaning and car care products make living environment much healthier.

Keeping time: 3 years from date of manufacture (in packing).

Removing coating from surface is possible with alcohol (ethyl or isopropyl), also by steam and next mechanically with microfiber cloth.

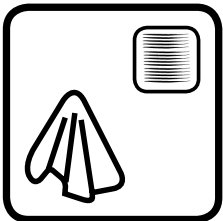

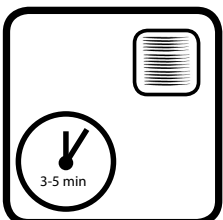

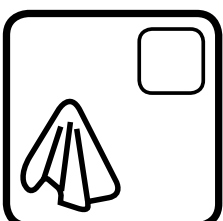

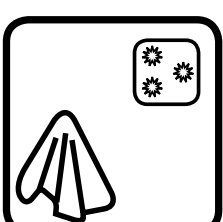

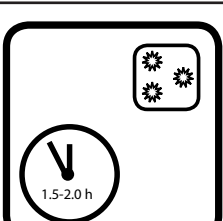

SURFACE PREPARATION:

Surface must be dry and clean before applying first time. For re-coating necessary only dry surface. It is not recommended to treat the window glass inside placement when not good air exchange because super hydrophobic surface can be reason of the unwanted sweat in window glass.

APPLICATION:

For application recommended microfiber cloths: terry structure for distribution/removing excess of the product and plane (polish) structure for polishing coated surface. Both cloths must be prepared from 20% polyamide and 80% polyester and density not less 250g/m²

Recommended use product quantity as less as possible. Consumption is only 3g/m² with possible losses. Useful coating in surface is only 1g/m².

	<p>Shake the bottle before use. Little wet terry cloth with product Cloth.Terry without excess. Close cap after use.</p>
	<p>Evenly distribute the product on dry surface by Cloth.Terry.</p>
	<p>Wait 3-5 min.</p>
	<p>Remove exceed the product by same terrycloth.</p>
	<p>Polish by plain cloth Cloth.Polish the surface.</p>
	<p>Don't expose the surface by rain or by action with wet cloth about 1,5-2 hours. Protective surface is obtained the best protection in 12 hours after coating.</p>

PRODUCT HAZARDS AND SAFETY INFORMATION:

See Material Safety Data Sheet for complete Health and Safety information. Do not use in confined areas without the proper safety precautions/equipment.

ADDITIONAL DATA:

Product is prepared according to existing legislation European Union. Product has not volatile matter and holds the nano components tight inside its structure. Nano particles cannot be separated one from polymer mixture. It guarantees that nano-sized particles do not get "loose" and incur to human organism and harm our health and surrounding environment. Product waster

Lasting effect: see for each included product.

PACKING OF THE NANOTECH EASY TO CLEAN PRODUCT NANOFORMULA CLEVERCLEAN SET

Product is packed in a convenient plastic bag, where you will find:

[100g CleverCLEAN for home interior;](#)

[100g CleverCLEAN for kitchen;](#)

[100g CleverCLEAN for bathroom/wc;](#)

Two 30cm x 30cm cloths set: [terry](#) and [polish](#).

Labels in three languages: English, Estonian, Russian;

Order customized labels is beginning from 500 units min. per product.

20 sets carton;

Carton's size: 38cm x 59cm x 22cm

Carton's gross weight : 9.90kg

Pallet: 40 cartons/800 bottles

Pallet's size: 120cm x 100cm x 192cm

Pallet's gross/net weight: 396kg/421kg

SHIPPING AND EXPORT INFORMATION

Non-hazardous for any transportation.

Export HS code: 3405909000
